

CLEHR

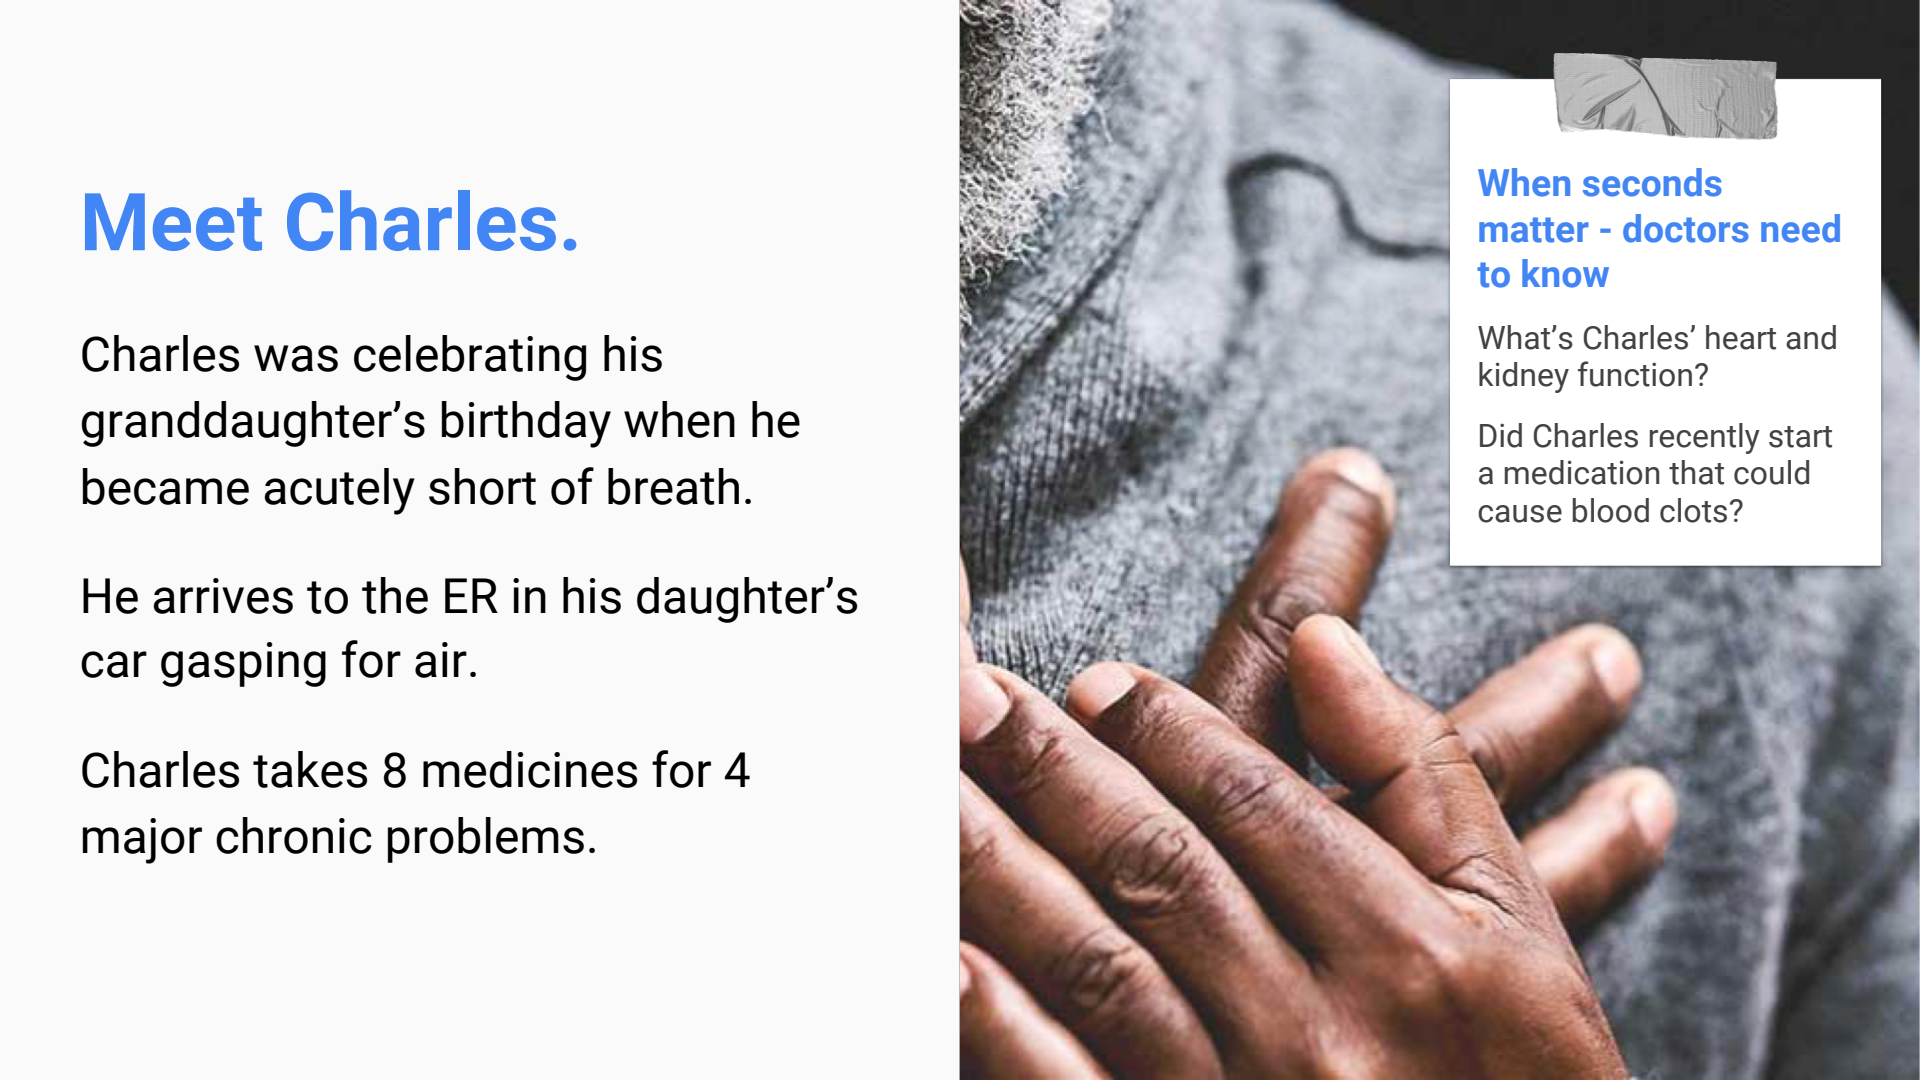

Curating health information to improve patient outcomes &  
the human experience of care delivery

# Meet Charles.

Charles was celebrating his granddaughter's birthday when he became acutely short of breath.

He arrives to the ER in his daughter's car gasping for air.

Charles takes 8 medicines for 4 major chronic problems.

**When seconds matter - doctors need to know**

What's Charles' heart and kidney function?

Did Charles recently start a medication that could cause blood clots?

## The problem

Clunky EHR + explosion of information =  
pertinent data scattered  
& buried which

- distracts clinicians (~15% of clinical time looking for data\*)
- can result in patient harm

\*EHR chart review & patient tracking time as % of total clinical hours across YNHHS EDs

# A market ripe for disruption

- Practice inefficiency has driven physician burnout to an all time high
- No competition or incentive to improve usability
  - EHRs built for billing not care
  - 3 large vendors with 70% of market
  - High switching costs
- New technology now enables interoperability with 3rd party overlays

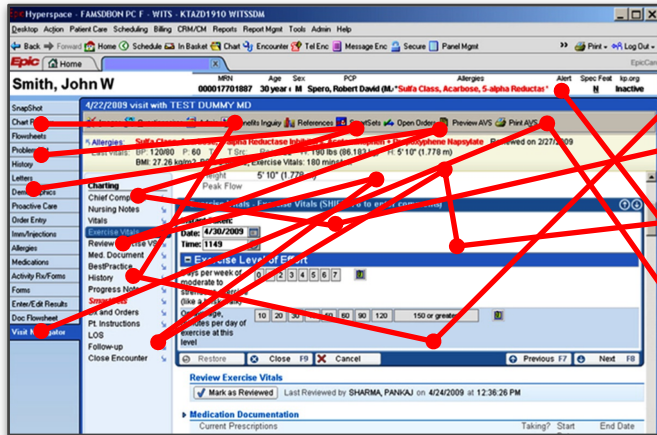

# The Problem

This is an actual screen capture of Epic that is publicly available on the internet. Gag clauses prevent sharing screen captures like this

The screenshot displays the Epic EMR interface for patient Smith, John W. (NPI: 000017701987, 30-year-old male). The patient's primary care physician is Robert David Spero, MD. The patient has several allergies listed, including Sulfu Class, Acarbose, S-alpha Reductase Inhibitors, Acetaminophen, and Pyropropophene Naproxate. The patient's last vital signs were recorded on 2/27/2009: BP 120/80, P 80, T 98.6, Resp 22, W 190 lbs (86.183 kg), H 5'10" (1.778 m), and Exercise Vitals: 160 minutes. The patient's height is 5'10" (1.778 m). The interface shows a form for "Exercise Vitals - Exercise Vitals (SHIFT+F6 to enter comments)" with a date of 4/28/2009 and a time of 11:43. The form includes a section for "Exercise Level of Effort" with a dropdown menu set to "moderate to strenuous exercise (like a brisk walk)" and a scale from 1 to 7. The scale is currently set to 7. The form also includes a section for "Review Exercise Vitals" with a "Mark as Reviewed" checkbox and a "Medication Documentation" section.

# The Problem

Here is a typical workflow for an initial emergency department assessment before seeing a medically complex patient

4 clicks  
Ejection Fraction

3 clicks  
Creatinine

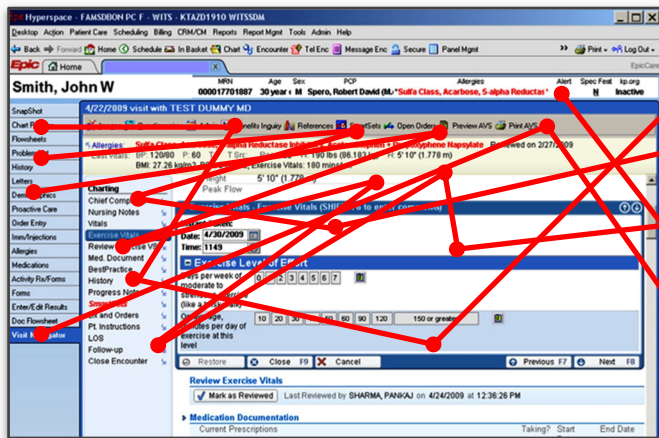

7 clicks  
Urine Culture

1 click  
BMI

2 clicks  
Care Plan

# The Solution

Curate and display customized information most salient to clinicians for safe & effective clinical decision-making

4 clicks  
Ejection Fraction

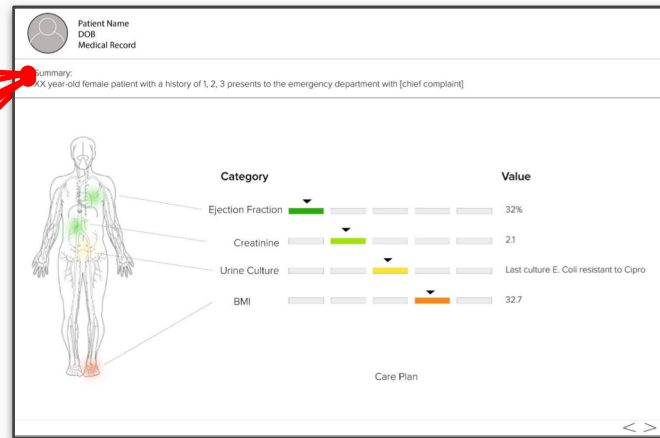

3 clicks  
Creatinine

7 clicks  
Urine Culture

1 click  
BMI

2 clicks  
Care Plan

1 click

# Business Model

**Product:** ED doctor dashboard nirvana

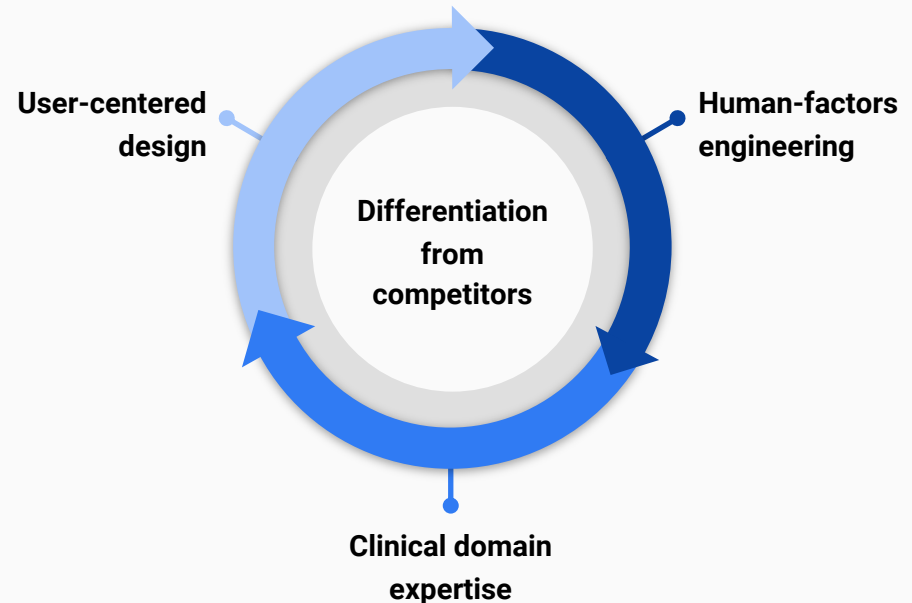

**Customer:** Medical practices, hospitals

**Value proposition:**

- Increased productivity
- Reduced errors
- Reduced physician burnout

**Revenue model:** subscription-based with customization services

**Distribution:** EHR-specific app stores (e.g., Epic App Orchard, Cerner Code)

# The team

*Innovators in digital health design, implementation & EHR integration*

**Ted Melnick,  
MD, MHS**

Digital health research

Yale School of Medicine

**Arjun Venkatesh,  
MD, MBA, MHS**

Implementation science

Yale School of Medicine

**Yauheni Solad,  
MD, MHS, MBA**

Informatician &  
Entrepreneur

Yale-New Haven Health

**Greg Makoul,  
PhD, MS**

Seasoned entrepreneur in  
digital health

Yale faculty | Founder &  
CEO PatientWisdom

# Milestones

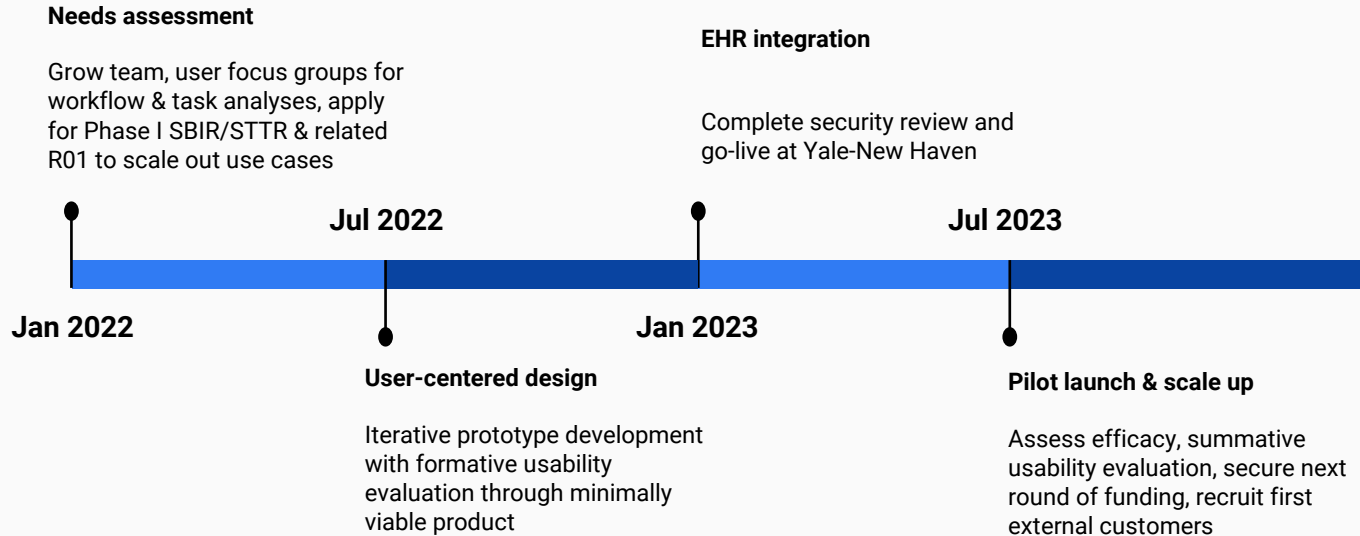

*Exactly what we would accomplish with Blavatnik funding*

## Budget Year 1

Consultants (design, human factors, data standards)	\$35,000
Software development contract (programming)	\$45,000
Insurance, legal & corporate fees	\$20,000

## Budget Year 2

Consultants	\$35,000
Software development	\$75,000
Project manager	\$60,000
Fees (legal, insurance, corporate & Epic App Orchard)	\$30,000
